I am not confident I wired this right in the schematic. I don't know where 12Vc goes from here.

Not sure on shunt value and output amplifying. The number after the A in the part number is the gain amount

I could not find the R and C values for this in the datasheet, but this structure was there last year. I think it has to do with the STM. Claude said these values are prob good. They are much smaller then last years
